Synthetic mixture and natural products for tanning and retanning.

#### **PERCENTAGES**

KRAV 600 is an easily soluble powder in water.

KRAV 600 is half astringency in order to obtain the leathers without contraction risk.

KRAV 600 contrarily to the synthetic tanning, it is not of decolourant. The dyes obtained on leather with KRAV 600 are very uniform without risk of stains.

The resistance and the vivacity of the skins worked with KRAV 600 are clearly superior to the lifelong tanning.

KRAV 600 provides a smooth and compact grain, equally the KRAV 600 have a quickly penetration, due its low astringency.

Due the special composition it provides some full and firm leathers.
